

CHS/3 AUTOMATIC SHEEP SKINNER

Machine for sheep skinning, based on servo motors that allow customization, can work from top to bottom or from bottom to top.

Adjustable **up/down and rotation movements**, allowing customization for maximum quality of the skin and carcasses.

The conical shape of the roller concentrates the effort on the central part of the skin to **protect** the sides and achieve **higher quality**.

The skin-holding clamps are fully integrated into the roller, providing greater **safety** and **ergonomics**.

3 working modes:
Small, medium, and large sheep.

Working stroke of up to **1,700 mm**

Intuitive operation and programming through a touch screen.

Occupies little space and operates silently.

Made of **AISI-304** stainless steel.

Dynamic working option (Non-stop)

Static working option (With stops)

Option to remove the skin from **bottom** to **top**

Option to remove the skin from **top** to **bottom**

Electricity

Voltage	Frequency	Power
400 V	50/60 Hz	7 kW

Sound Level < **70 dbA**

Weight = **850 kg**

Production: **Up to 500 sheep/hour**
